P1	Making sketch for the prototype build plan	2026-10-01	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Posts: cut four lengths of 582 mm, square, and deburr.

Water post: cut one length of 200 mm from the same bar.

Tap the centre hole M5, 12 deep, at both ends of every piece (the water post needs the bottom end only).

Each post stands on the frame through a notch in the deck, held by inside corner brackets: a front post by two (front and back), a rear post by one on its inner side.

The water post is screwed to the deck from below, into its tapped end, before the deck goes on the frame.

Before standing a post up, slide in T-nuts: four in the front slot of each rear post for the panel screws.

Check: every post upright within 1 mm over its length.
