WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two rails 860 mm (front and back) and two rails 305 mm (sides).

The front and back rails fit between the post tops; the side rails fit between the front and rear posts.

Hold each with inside corner brackets under the rail end (front and back rails) or on the inner face (side rails):

M5 x 10 screws into drop-in T-nuts.

All rail tops flush with the post tops, 570 mm above the deck.

Slide T-nuts into the top slots for the canopy screws before closing the frame: 4 per long rail, 2 per side rail.

Check: diagonals across the top equal within 2 mm; the panel's top edge just meets the side rails.
