WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Cut two rails 900 mm long (front and back).
- Cut four rails 410 mm long: two end rails and two cross rails.
- Saw square, within 0.3 mm; deburr every end.
- Lay the frame upside down on a flat bench: the long rails run the full 900, the short rails fit between them.
- Cross rails centred 150 mm each side of the middle (300 apart).
- Join each meeting with one inside corner bracket on the inside faces, two M5 x 10 screws and two drop-in T-nuts.
- Before closing the frame, slide drop-in T-nuts into the top slots:
- 3 per long rail and 2 per short rail, for the deck screws.
- Fits: the deck sits on the top faces; the posts stand on the end rails and on the ends of the back rail.
- Check: diagonals equal within 2 mm; frame flat on the bench.

H2Bench frame: making sketch

DRAWING NO. HBN-DWG-101			REV P1	SHEET 1 of 1	SIZE ANSI B
