WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut the sheet to 900 x 450 mm; round the corners lightly.

Front notches, one at each end: 20 mm in from the end edge and 60 mm long, from 85 to 145 mm back from the front edge.

Rear notches: 40 x 20 mm at each back corner.

Frame screws: 5.5 mm, countersunk from the top, over the T-nuts in the frame's top slots (mark through from the frame).

Guard rods: four 10.5 mm holes on a 156 mm square centred 175 right of the middle and 40 in front of the centre line. Press an M10 tee nut into each from below before the deck goes on.

Water post: one 5.5 mm countersunk hole from below, 146 right of the left end and 80 back from the front edge; fit the post now.

Mounts (stand, feet, brackets, cradle, saddle, regulator, bridge): set each in place later, mark through its holes, drill 4 mm pilots 10 deep, fix with 5 mm stainless self-tapping screws.

Drip lip: 10 x 10 x 1.5 angle, front 900 and four end pieces; screw every 100 mm on a bead of silicone.

Check: the deck lies flat on the frame with every notch clear.
