WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Plate: cut 176 x 176 mm from 4 mm aluminium; cut a 130 x 130 mm opening in the middle (drill the corners, jigsaw, file).

Four 10.5 mm holes on a 156 mm square (78 mm from the centre).

Rods: cut four M10 stainless threaded rods 363 mm long; file the ends and run a nut over each end to clean the thread.

Each rod screws into the tee nut under the deck and is locked by a nut and washer on top; the plate is clamped between two nuts at the top, 60 mm above the tank top.

The manifold, gauge and lines pass up through the opening.

Check: plate level within 1 mm; the tank lifts out only after the plate comes off.
