WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a blank 57 wide x about 190 long (top 85, legs 38, feet 15; check the bend allowance on a scrap first).
Fold the legs down 90 degrees, then the feet outward 90 degrees.
Top 85 x 57 mm, 40 mm above the deck; front and back left open so the stack's fan can draw and blow air through.
Drill the top to the stack's mounting holes (confirm on the part).
Two 5.5 mm holes in each foot, 15 mm each side of the middle, for 5 mm deck screws.
Fit: the stack sits on the top, its hydrogen inlet on the left side, 5 mm above the bridge top, facing the regulator.
Check: the stack is level; the fan face is clear of the bridge.
